Ligna

Clad Riser Door System

Ligna is a concealed riser doorset for use in areas where the wall is finished with tiles or decorative plaster.

Ligna is an extremely versatile riser doorset designed to accept a range of cladding, creating a fully concealed finish with no disturbance to the flow of design.

Supplied as a pre-hung, pre-fabricated four sided doorset, Ligna is ready to be fitted straight into the partition and finished with the chosen wall covering, perfect for riser door and service cupboard situations where you want to conceal the door and need a simple,

robust and neat solution. The Ligna doorset has smoke seals as standard, it's fully fire rated up to FD120 and offers acoustic reduction options - providing a solution for any application.

Seamless Finish

Choose the finish which best suits your project. With the choice of two different material applications, design options with Ligna are endless.

Maximum Door Sizes*

Door Height	2869mm
Door Width	1000mm

Minimum Door Sizes

Door Height	1250mm
Door Width	450mm

Max. Surface Thickness

Ligna Plastered	4mm
Ligna Tiled	12mm

*Actual max. May vary with fire rating.

Contact the Selo team on **020 3880 0339** to discuss technical information in more detail.

Ligna Configurations

A fully integrated riser door system designed to accept cladding of varying finishes to create a flush, sleek finish, concealing the doors into the wall.

1 Ligna concealed frame with metal door leaf

2 Plasterboard lining

3 Stud

4 Perforated fixing flange

5 Backer board

6 Finished surface

Ligna Ironmongery

The Ligna doorset is provided with a 3-point locking system operated via a concealed lock or square key.

Standard square key

The 3 point locking system is operated by a square key budget lock. The door is supplied with a stainless steel lock insert which does away with ugly plastic bungs and stops scratches around the hole from using the key.

Euro cylinder lock

For situations where you require higher security and the ability to lock the door with a euro cylinder can be used.

5mm Bit key (optional)

The 3 point locking system is operated by a 5mm bit key lock. The key can be held in the lock and used as a handle.

Ligna Hinge System

The Ligna pivot hinge is fully concealed and enables a smooth outward door swing with minimal on-site installation.

Pivot hinge

Manufactured from stainless steel with self-lubricating sintered bearings fitted to the sockets, providing maintenance-free usage.

The hinge and base pin are provided pre-fitted to the Ligna frame. The door leaf is also provided with cut-outs ready for the sockets. No floor box is required and the pin is completely concealed.

Ligna Finishes

The Ligna doorset is provided pre-painted, providing a superior finish and reducing site labour.

Doorset finish

The Ligna doorset comes pre-finished in a powdercoated finish to a standard RAL colour of your choice.

FDKL signage

Available to suit the Ligna door leaf.

Ligna Packaging & Protection

We take extra effort to ensure your products arrive safely.
For extra protection, additional coverings can be provided.

Packaging for delivery

On confined, busy sites doors need to be carried by hand a lot of the time. To keep the doorset protected, Ligna comes fully protected with polystyrene corners and heat shrink wrapped in heavy duty polythene.

On-site protection

We understand the demanding requirements of a construction site and the damage that can be done once the doorset is installed if not properly protected. We can provide corrugated plastic protection sheets to be taped to the door faces, protecting them from scuffs and scratches.

Ligna Certifications

The Ligna doorset has been bi-directionally tested and certified for fire resistance, air leakage, thermal transmittance and acoustic performance.

Quench[®] Fire-stopping Protection

E120 fire-rated doorsets *without additional on-site firestopping!*

Our metal riser doorsets now have the option to arrive on-site with the **fire stopping material already fixed into place.**

Fail-proof installations

No need for intumescent mastic to be applied on site.
Assurance for contractors and building control.

Safe & Reliable

Avoids working within the riser to apply intumescent,
removing fall risk and hazardous working environments.

Workmanship

Removes the final element of labour dependent
workmanship, a truly complete pre-assembled doorset.

Risk-free

In making the door set 100% pre-assembled it assists in
mitigating risk from an installation perspective.

Effective time management

This system will save you installation time.

Simplicity

Only requires a cordless-drill driver, a level and screws
to install the doorset.
